NEW	Knock Out®	Light Red to Deep Pink	Light Tea	Shrub*
NEW	Party Hardy™	Deep Pink w/Lighter Reverse	Mild Apple	Shrub*
	Teeny Bopper	Scarlet-White Bicolor	Light	Shrublet*

Note: An asterisk (*) denotes roses on their own rootstock. Unlike grafted plants, these roses are grown on their own roots for improved performance. "Own root" roses are great for cold-weather regions. Even if extreme winter temperatures kill the plant above ground, the roses come back true-to-form in spring from their own roots, unlike grafted plants which send up less desirable flowers of the rootstock.

SUCCESSFUL ROSE GARDENING TIPS

Choosing the right planting location, getting off to a good start, and using the proper rose care products regularly can help keep your roses happy and healthy.

Planting Location

Roses prefer at least six hours of direct sunlight and good air circulation to encourage plentiful blossoms and reduce chance for disease.

Starter Fertilizer

Get your roses off to a good start by using a starter fertilizer at planting time – **Garden Elements Natural & Organic Starter Food** or **Master Start Fertilizer**. The high-phosphorus blend of major nutrients - in addition to essential micro-nutrients - provide the food your roses need. Planting time is the best time to get this fertilizer down into the root zone.

Planting Mix

Mixing **Master Nursery Eureka Planting Mix** with your native soil at planting time helps loosen compact soil, helps your soil retain moisture and improves soil aeration. Dig your planting hole 2-3 times as wide as the rose roots, and 1½ times as deep. Mix the **Planting Mix** with your native soil about 50-50, and use this amended soil to plant your rose. Your roses will thank you!

Neem Oil

Neem Oil is a broad-spectrum pesticide for control of insects, diseases and mites on roses and other plants. Used as directed, **Neem Oil** can help prevent diseases that commonly infect roses such as black spot, rust, powdery mildew and others. It also treats insects (aphids, weevils, and much more) and diseases that are present on the plants.
